

KFi STUDIOS

CANOPY | DESIGNED BY GENSLER

The Canopy workstation creates a personal haven for focused, flexible work within open environments. Its distinctive upholstered hood provides visual and acoustic privacy, softening ambient noise and minimizing distractions. Designed for adaptability, Canopy features a height-adjustable work surface with intuitive controls and a digital readout, integrated lighting for tasks and video calls, and built-in power for keeping devices connected.

The fully upholstered privacy hood can be specified in your choice of fabric, while the lower surround is available in wood veneer, laminate, or upholstery, allowing for customization that complements a range of interiors. With its refined architectural form, Canopy brings structure, comfort, and focus to today's dynamic workplace.
